**SAY NO TO
SINGLE-USE
PLASTICS**

Lake Erie Watershed Protection Alliance

August 2019

The Problem

It is estimated that 10,000 metric tons of plastic pollution enter the Great Lakes each year. Plastics pose a serious threat to fish, birds, and other aquatic life living in the ecosystem who may eat the plastic or become entangled in it.

Chemicals already found in the water may cling to plastic pieces and enter the food web through ingestion.

Facts

- Plastic constitutes approximately 80% of all trash on the Great Lakes shorelines.
- One million sea birds and marine mammals are killed annually from plastic in the water.
- Single-use bags are used for an average of 12 minutes, but take over 500 years to degrade in the environment.
- The average person throws away about 185 lbs. of plastic per year.
- Plastic in water breaks down into such small fragments that pieces from a one-liter bottle could end up on every mile of beach world-wide.
- Virtually every piece of plastic ever made still exists on Earth.
- New York State retailers will no longer give out plastic carryout bags as of March 1, 2020 under Article 27 Title 28 of the Environmental Conservation Law.

How You Can Help

- Use cloth, mesh, or other reusable bags.
- Drink beverages from reusable bottles.
- Use washable cutlery instead of plastic utensils.
- Buy products that do not use extra packaging.
- Say “no” to straws and plastic lids at restaurants.
- Pick up litter.
- Recycle!
